

Multilink Piezo Request to Exit Push Buttons

The PZ range of request to exit buttons have been designed to provide high vandal resistant in almost any situation.

Each button is manufactured to a high specification, is vandal resistant, has low pressure operation and has visual indication. The bi-colour LED (red for standby and green for access allowed) is powered from 12vdc and does not require a ballast resistor (it's built in).

Originally designed to function with the Multilink DDS Toplock control systems the PZ button will of course work in any situation where high vandal resistance is required.

Contacts: N.O
LED: 12vdc 3 wire
